## VIBRATORS

### Custom Designed Mounting Brackets

EARTHQUAKE'S custom mounting brackets are an essential part of the vibration process. They are engineered to maximize the efficient distribution of vibration through the bin or hopper walls. This efficient distribution of vibration is beneficial in several ways. First of all it increases the effectiveness and overall performance of the vibrators. With the maximum transmission of vibration even the most stubborn materials will flow easily. Secondly, the efficient transmission of vibration protects the bin wall from general fatigue and cracking. The even dispersal of vibration eliminates vibratory stress on the bin therefore preventing stress cracks and fatigue. Avoid costly repairs by using a genuine EARTHQUAKE mounting bracket.

**FREE WITH THE PURCHASE OF AN EARTHQUAKE PISTON VIBRATOR.**

Model EPMB-1

Dimensions :  
Height: 47mm  
Width: 75mm  
Length: 100mm

Model EPMB-2

Dimensions:  
Height: 90mm  
Width: 100mm  
Length: 350mm

Model EPMB-3

Dimensions :  
Height: 150mm  
Width: 250mm  
Length: 250mm
